The Advanced Hazmat Life Support (AHLS)-Course is a 16-hour, two-day course that teaches healthcare professionals to **medically manage** patients exposed to hazardous materials. The focus is on chemical incidents (incl. nerve gases). Incidents with exposure to biological and radiological events are also covered.

Learning objectives:

- Principle approach to Hazmat-events
- Self- and partner protection
- Toxidromes
- Poisoning treatment paradigm, including specific Antidotes

Target audience:

- Emergency physicians, prehospital emergency physicians, paramedics
- Nurses of the emergency departments
- Toxicologists
- NBC-specialists of the firefighters and the army
- Military physicians and personnel of the civil protection of the population
